for your Mercedes-Benz SLS AMG

## MANSORY Cormeum – super sports car in a striking carbon shell

660 HP and 90 kg less weight are only two unique selling features of this exceptional automobile which is limited to 15 vehicles in a class of its own. In order to meet the increased requirements of the sports car when it comes to light weight and torsional stiffness, Kourosh Mansory's team optimises almost the entire car body and even replaces the roof and gull-wing doors with ultra-light designs, which were developed in-house. A MANSORY front spoiler replaces the production series bumper and due to its well engineered shape, it reduces the lift at the front axle. Larger air inlets in connection with a new LED light unit provide the two-seater with an even more sporty appearance. Additionally, the air inlets supply the enlarged radiators with the increased demand for fresh air and subsequently channel the air out from underneath the new bonnet. MANSORY also replaces the front and rear wings with broader, newly designed light-weight components. This widens the Cormeum by 66 mm at the front axle and an impressive 84 mm at the rear axle. MANSORY side skirts make the two-seater appear even lower and longer, and draw even more thrilling attention to the rims. The rear has also been significantly redesigned by the aerodynamic engineers at MANSORY. The rear apron has been exchanged and a race diffuser provides the additional downforce. A rear spoiler with carbon flaps completes the overall aerodynamic package.

## Interior

As usual, MANSORY turns the interior into a highly functional control centre with quality and innovative design that is second to none. Only the finest materials find their way into the car's interior, ensuring the greatest sense of comfort. Master craftsmen apply their skills using leather that is extremely durable, yet exceptionally soft. The characteristic, natural product with its special grain and perfect decorative stitching by the hands of a true professional, convey a stylish elegance all around the newly designed airbag steering wheel. The aluminium pedal system and the real carbon applications complete the luxurious overall impression of the Corneum.

## Fully forged & Alloy Wheels

The extended wheel houses of the MANSORY Cormeum are filled with exclusively forged wheels with central locking system. The 9x20 inch wheels with 265/30 tyres at the front and 11x21 inch wheels with 295/25 tyres at the rear axle are provided by Michelin, MANSORY's partner.

Thanks to new suspension and shock absorbers, Cormeum's centre of gravity is 20 mm lower than the basic model and therefore emphasises the exclusive rims even more.

## High Performance

Core part of the engine modification is the installation of the high-performance compressor units. A sports air filter and a stainless steel sports exhaust system are also utilised. These components are precisely adjusted to one another with the help of a new characteristics map for the engine's electronic system. Reaching its top performance of 660 HP/485 kW and a maximum torque of 4,850 RPM, the MANSORY engine meets exactly what its ambitious motor sports clientele is looking for.

MORE THAN TRADITION, MORE THAN RACING

Company owner and namesake Kourosh Mansory and his team have been customising exclusive car brands since 1989. MANSORY stands for high-tech production combined with master craftsmanship and the finest materials. Harmoniously designed aerodynamics packages, ultra-light aluminium wheel rims and powerful engine performance upgrades form the basis of the company's technology range. Top-quality accessories and stylish interiors complete the range.
